

1. A dispenser for a hand covering, comprising:
2 a housing to receive a roll of thin, flexible film having opposing side edges to be
used as a hand covering;
4 a form configured to be grasped by a user through the film such that the film
temporarily clings to the user's hand; and
6 a set of members on either side of the housing to retain the side edges of the film
as it moves through the dispenser for each use.

2. The dispenser of claim 1, wherein the members on either side of the
2 housing to retain the side edges of the film are interlocking chains.

3. The dispenser of claim 1, wherein the members on either side of the
housing to retain the side edges of the film are opposing belts.

4. The dispenser of claim 1, further including a cutter to cut the film into
2 individual sheets.

5. The dispenser of claim 1, wherein:
2 the form is connected to a pull-down mechanism that lifts a portion of the housing
during use; and
4 the weight of the housing falling back into position is responsible for resetting the
dispenser for the next use thereof.

6. The dispenser of claim 1, further including a hand-shaped opening to
2 assist a user in grasping the form.

7. A dispenser, comprising:
2 a roll of thin, flexible film having opposing side edges and an adhesive surface to
be used as a hand covering;

- 4 a form configured to be grasped by a user through the film with the adhesive
surface facing outwardly such that the film temporarily adheres to the user's hand; and
6 a set of members on either side of the housing to retain the side edges of the film
as it moves through the dispenser for each use.

8. The dispenser of claim 7, wherein the members on either side of the
2 housing to retain the side edges of the film are interlocking chains.

9. The dispenser of claim 7, wherein the members on either side of the
housing to retain the side edges of the film are opposing belts.

10. The dispenser of claim 7, further including a cutter to cut the film into
2 individual sheets.

11. The dispenser of claim 7, wherein:
2 the form is connected to a pull-down mechanism that lifts a portion of the housing
during use; and
4 the weight of the housing falling back into position is responsible for resetting the
dispenser for the next use thereof.

12. The dispenser of claim 7, further including a hand-shaped opening to
2 assist a user in grasping the form.
